PERFORMANCE ASSURANCE – STANDARD WITH EVERY OILGEAR COMPONENT

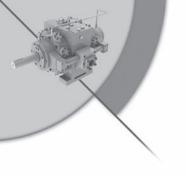

Every Oilgear product is shipped to you with our Performance Assurance — a corporate commitment to stay with your installation until our equipment performs as specified.

Hydraulic equipment and systems have been Oilgear's primary business since 1921. For decades, we have developed hydraulic techniques to meet the unique needs and unusual fluid power problems of machinery builders and users worldwide, matching fluid power systems to a tremendous range of applications and industries. Our exclusive Performance Assurance program is built upon that strong foundation.

As a customer, you also benefit from access to Oilgear's impressive technical support network. You'll find factory trained and field-experienced application engineers on staff at every Oilgear facility. They are backed by headquarters staff who can access the records and knowledge learned from decades of solving the most difficult hydraulic challenges.

When your design or purchase is complete, our service is just beginning. If you ever need us, our Oilgear engineers will be there, ready to help you with the education, field service, parts and repairs to assure that your installation runs smoothly—and keeps right on running.

PUMPS WITH MULTIPLE FIXED DELIVERIES FOR HIGH PRESSURE (OIL OR 95/5 HWCF) HEAVY DUTY APPLICATIONS

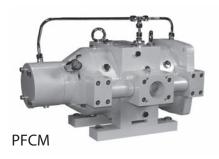

Internationally known as a world class hydraulic company, Oilgear specializes in the design, engineering technology and equipment needed to solve tough hydraulic problems by combining the right pump and components into an engineered system that will meet specific needs.

Four of Oilgear's long line of pumps are included in this brochure. They were designed for applications that require the following:

- HIGH PRESSURE
 Up to 14500 psi (1000 bar) with most hydraulic fluids (5000 psi (345 bar) with 95/5).
- HEAVY DUTY CONSTRUCTION
 Many of these units have operated 40,000 hours before inspection and reconditioning is necessary.
- HIGH DIRT TOLERANCE
 Check valve design provides a high degree of contamination resistance.
- OPERATION ON LOW VISCOSITY and SPECIAL FLUIDS INCLUDING 95/5
 These pumps are designed with hydrostatic type bearings and a stationary cylinder.
- MULTIPLE DELIVERIES Up to three separate displacements available from a single pump.

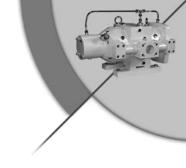

PFBA

HIGH PRESSURE AXIAL PISTON PUMPS

Delivery Valve **Pumping Pistons** ■ Six hardened steel pistons located in a stationary body are not subject to centrifugal force, thus Optional Integral reducing load and wear. The piston load is caused by pumping action only, therefore higher operating speeds are possible. Steel Piston Shoes ■ Hydrostatically balanced design reduces piston shoe load and provides lubrication for increased life ■ Facilitates a high degree of contamination wear resistance ■ Permits higher pressure operation with long life ■ Allows operation with low viscosity or other Bearings special fluids including 95/5. Consult Oilgear for more information.

Supercharge Pump

- Built-in gear pump supercharges, lubricates and provides case flow for cooling the main pump
- Eliminates need for external supercharge pump

Drive Shaft

■ A through drive is provided for tandem mounting other equipment

■ Shaft/swash assembly rotates in a plain bearing at the front end and at the rear

Single Swash Plate

■ Hardened steel for hard on hard wear resistance

Swashmember with 13° Angle

- Results in low piston head loading
- Allows high speed operation
- Design enables pump compatibility to high pressure and high shock loads
- A polymer coated plate is attached to the swashmember to provide a bearing surface for thrust loads

Inlet Valve

- Inlet and delivery check valves are positive seated for high volumetric efficiency
- Rugged, high response, lightweight poppet construction assures long life

These axial piston pumps are used in a wide variety of applications, including die casting and injection molding machines, high pressure test rigs, civil and marine projects, intensifier systems, extrusion presses, forging presses and high pressure forced lubrication systems for long turbines as well as metal forming machines.

The "PFBA" Pump has proved itself successful for use with high water content and low viscosity fluids.

If using these fluids, please consult Oilgear for more information.

Oilgear How to Order

PFBK

HIGH PRESSURE AXIAL PISTON PUMPS

Delivery Valve Cartridge

- Rugged, high response, lightweight poppet construction assures long life
- Cartridge constructed inlet and delivery valve assemblies allow ease of maintenance
- Positively seated inlet and delivery valve for high volumetric efficiency

Pistons

■ Six hardened steel pistons located in stationary cylinders are not subject to centrifugal force, thus reducing load and wear. The piston load is caused by pumping action only, therefore higher operating speeds are possible.

Steel Piston Shoes

- Hydrostatically balanced design reduces piston shoe load and provides lubrication for increased life
- Facilitates a high degree of contamination wear resistance
- Permits higher pressure operation with long life
- Allows operation with low viscosity or other special fluids including 95/5. Consult Oilgear for more information.

Inlet Valve Cartridge

Optional Integral Supercharge Pump

- Eliminates need for extra electric motor and external supercharge pump
- Lubricates and provides case flow for cooling the main pump

Through Drive Capabilities

■ Allows mounting of additional pumps if necessary with up to 50 hp (37,3 kw) capacity

Polymer Coated Bearing with Forced Lubrication

- Enables operation with low viscosity or other special fluids
- Provides superior bearing life

Hydrodynamic Thrust Bearing with Forced Lubrication

■ Carries the thrust load giving long life and allows operation with low viscosity or special fluids

Single Swash Plate

Hardened steel for hard on hard wear resistance

Swashmember with 9° Angle

- Results in low piston head loading
- Allows high speed operation
- Design enables pump compatibility to high pressure and high shock loads

Foot Mounting or Flange Mounting

■ Select the mounting arrangement that suits the application

Single or Double Discharge

- Provides stepped volume selection
- High/low flow capability permits horsepower limiting circuits
- Permits servicing two independent circuits at the same time

High Pressure

Up to 14500 psi (1000 bar) with most hydraulic fluids – 5000 psi (345 bar) with 95/5. Consult Oilgear for more information.

Heavy-Duty Construction

Many of these units have operated over 40,000 hours before inspection and reconditioning is necessary.

Wide Variety of Applications

High pressure test rigs, civil and marine projects, intensifier systems, extrusion and forging pressure and other heavy duty metal forming machines.

PFCM

HIGH PRESSURE AXIAL PISTON PUMPS

- Balanced design eliminates need for thrust bearings
- Provides long life
- Enables easy re-buildabilty
- Permits high rotational speeds

Delivery Valve Cartridge

- Rugged, high response, lightweight poppet construction assures long life
- Cartridge construction inlet and delivery valve assemblies allow ease of maintenance
- Positively seated inlet and delivery valves for high volumetric efficiency

Foot Mounting or Flange Mounting

Select the mounting arrangement that suits the application

Single or Double Discharge

- Provides stepped volume control
- High/low flow capability permits horsepower limiting circuits
- Permits servicing two independent circuits at the same time

Swashmember with 9° Angle

- Results in low position head loading
- Allows high speed operation
- Design enables pump compatibility to high pressure and high shock loads

Hydrodynamic Thrust Bearing with Forced Lubrication

 Carries the thrust load giving long life and allows operation with low viscosity or special fluids

Steel Piston Shoes

- Hydrostatically balanced design reduces piston shoe load and provides lubrication for increased life
- Facilitates a high degree of contamination wear resistance
- Permits higher pressure operation with long life
- Allows operation with low viscosity or other special fluids including 95/5. Consult Oilgear for more information.

Inlet Valve Cartridge

 Cartridge construction inlet and delivery valve assemblies eases maintenance

Optional Internal Supercharge Pump

- Eliminates need for extra electric motor and external supercharge pump
- Lubricates and provides case flow for cooling the main pump

Through Drive Capabilities

 Allows mounting of additional pumps if necessary up to 50 hp (37,3 kw) capacity

Overload Sensing Device

■ This unique, patented overload protection device provides electrical signal in the event of an out-of-balance axial piston load.

Pistons

■ Twelve hardened steel pistons located in two stationary cylinders are not subject to centrifugal force thus reducing load and wear. This piston load is caused by pumping action only, therefore higher operating speeds are possible.

Polymer Coated Bearing with Forced Lubrication

- Enables operation with low viscosity or other special fluids
- Provides superior bearing life

High Pressure

Up to 14500 psi (1000 bar) with most hydraulic fluids – 5000 psi (345 bar) with 95/5. Consult Oilgear for more information.

Heavy-Duty Construction

Many of these units have operated over 40,000 hours before inspection and reconditioning is necessary.

Wide Variety of Applications

High pressure test rigs, civil and marine projects, intensifier systems, extrusion and forging presses and other heavy-duty metal forming machines.

Dilgear How to Order

PFCS

HIGH PRESSURE AXIAL PISTON PUMPS

Pistons

■ Eighteen hardened steel pistons located in two stationary cylinders are not subject to centrifugal force thus reducing load and wear. The piston load is caused by pumping only, therefore higher operating speeds are possible.

Steel Piston Shoes

- Hydrostatically balanced design reduces piston shoe load and provides lubrication for increased life
- Facilitates a high degree of contamination wear resistance
- Permits higher pressure operation with long life
- Allows operation with low viscosity or other special fluids including 95/5. Consult Oilgear for more information.

Three Separate Deliveries (1/3 each)

- Deliveries can be combined together in one circuit
- Deliveries can be completely separated in three circuits
- Deliveries can be any combination of two circuits
- Can provide limited power consumption
- Allows design flexibility

Cartridge Type Inlet and Outlet Check Valves

- Positive seating results in very high volumetric efficiencies
- Are easy to service

Optional Thru-Shaft

■ Permits mounting of additional pumps

Replaceable Piston Sleeves

■ Allows economical rebuilding without cylinder replacement

Precision Manufactured White Metal Bearings with Forced Lubrication

- Enables operating with low viscosity or other special fluids
- Provides superior bearing life

Double Sided Counterbalanced Swashblock with Replaceable Swash Wear Plate

- Balanced design eliminates need for thrust bearings
- Provide long life
- Enables easy re-buildability
- Permits high rotational speeds

Axial Overload Sensing Devices

- Simple dependable design
- Senses unbalanced (piston load) condition by detecting shaft movement
- Provides shut-down or warning signal before damage occurs

Swashmember with 8° Angle

- Results in low piston head loading
- Allows high speed operation
- Design enables pump compatibility to high pressure and high shock loads

Many of these units have operated over 40,000 hours before inspection and reconditioning is necessary. Experience

Typical applications for these units include – open and closed die forging presses, piercing presses, coining presses, rubber pad presses, etc.

DISCHARGE BLOCKS

There is a wide and diverse variety of discharge blocks and integrated manifolds available incorporating valves for the various types of installations. Contact the factory with specific requirements.

DIMENSIONS* (Without Discharge Block)

	L LE	NGTH	w w	IDTH	H HE	IGHT	WEIGHT		
UNIT	in.	mm	in.	mm	in.	mm	lb.	kg	
PFCS440	16.12	1179	24.57	624	22.72	577	2469	1120	
PFCS580	46.42	1179	24.57	024	22.12	377	2409	1120	

^{*} All dimensions are approximate. For detailed information consult your factory representative.

HOW TO ORDER - PFCS

BLOCK NUMBER EXPLANATION	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17
HIGH PRESSURE PUMP EXAMPLE	Р	F	C	S	440	Α	*	М	500	L	F	R	L	N	NN	Α	В

1 = UNIT

P = Pump

2 = TYPE

F = Fixed

3 = DESIGN

C = Dual Swash

= FRAME

S = Up to 630 ml/Rev

= DISPLACEMENT

440 = 440 ml/Rev

580 = 580 ml/Rev

6 = DESIGN SERIES

A = Standard for Mineral Oil

7 = MODIFIER

* = Designated by Factory

8 = DIMENSIONS

M = Metric

9 = MAX. WORKING PRESSURE

500 = For 440 Size

350 = For 580 Size

10 = ROTATION (Facing Drive Shaft)

L = Counterclockwise (CCW)

Left Hand

R = Clockwise (CW) Right Hand

11 = MOUNTING

F = Foot Mounting (Standard)

12 = INLET POSITION (Facing Drive Shaft) Note: Inlet is always on the opposite

side of discharge

L = Left Side with Horizontal Connection

R = Right Side with Horizontal Connection

A = Left Side with Vertical Connection

B = Right Side with Vertical Connection

13 = DISCHARGE POSITION (Facing Drive Shaft)

Note: Discharge Position is always on the

opposite side of inlet

L = Left Side

R = Right Side

14 = DISCHARGE BLOCK

N = No Connection Block Fitted

(Available as a separate item; consult Oilgear)

15 = SHAFT

NN = Standard Key

16 = FAULT SWITCH

A = Micro Switch and Connector

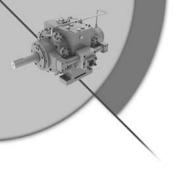

17 = SEALS

B = Buna N

E = E.P.D.M.

V = Viton

Z = Special
